Top 5 Security Plugins
You Should Know About

This is an extra resource to go along with the original article:
[Are Your WordPress Security Measures Enough? What You Should Know](#)

WordPress has plenty of plugins to keep your site safe, but are they all up to the job? Here is a list of some of the better options out there.

Sucuri Security

In addition to basic protection like monitoring and recording your site for suspicious activity, [Sucuri Security](#) also hides WP version information, protects your upload directory, restricts access to wp-content, wp-includes and your file editor.

iThemes Security

See all the ways iThemes Security Pro secures and protects your WordPress site.

	iThemes Security	iThemes Security Pro
Remove update notifications from specific user roles	✓	✓
Remove Windows Live Write header information	✓	✓
Remove RSD header info	✓	✓

iThemes Security focuses on brute force protection, monitoring core files, two-factor identification, secure passwords and hiding login and admin pages from potential hackers.

Wordfence Security

Wordfence™
You care about what you build.
Protect your websites with Wordfence.

GET PREMIUM   GET PLUGIN

While similar to iThemes Security, Wordfence Security specializes in scanning files, blocking IP addresses, blocking redirects from other countries and sending you custom alerts for suspicious activity.

BulletProof Security

[BulletProof Security](#) has an active support forum in addition to several key security features, including easy one-click setup, .htacess protection, login monitoring, database backups, email alerts and general file monitoring.

All In One WP Security & Firewall

A free plugin, [All In One WP Security](#) covers a lot of bases, including disabling WP meta information, limiting brute force login attempts, protection of specific files, firewall protection, spam prevention and file change detection, among others.
